

23 February 1973

MEMORANDUM FOR THE RECORD

SUBJECT: CIRIS Data Call

1. I discussed the CIRIS data call with [] at lunch today, telling him that the revised instructions would be ready for issuance about 1 March. He agreed to this and we arranged that it would be done through his office, as was the procedure last year.

STAT

2. I let [] know that we were aware of [] work on his management systems, offering to be of whatever service we could in the matter and I reminded him we stood ready to modify CIRIS in an effort to produce a system to answer the needs of both DCI and DOD. Hall was appreciative but noncommittal.

STAT

3. I would suggest that at some later date, as you keep abreast of what [] is doing, another effort be made to marry the systems and to give [] another full-scale briefing on the state of the art. This should be done not so much to protect the virginity of CIRIS but to save the community money and to prevent the possibility of DOD developing a system of relatively little use to the DCI. My point is that something is out of whack unless the finally developed system serves the interests of both parties.
